

DATA: Macro Crises Since 1870

The data in the Excel file corresponds to index series of real per capita Gross Domestic Product (GDP) and Private Consumption Expenditures (C) for the countries in the sample (2006=100).

There are four spreadsheets in the file:

- (1) "Main", with hyperlinks to the data by country and macro-variable;
- (2) "Documentation", with descriptions of the sources and methodologies used to construct each series, split by period;
- (3) "GDP", with the long-term series on GDP p.c.; and
- (4) "C", with the long-term series on C p.c.

The last two spreadsheets contain the aforementioned index figures ordered by country (as indicated in the column labels).
