Short- and Long-Term Effects of Universal Preschool: Evidence from the Arab Population in Israel

Analía Schlosser

The empirical analysis of this paper was conducted at research room of the Israeli Central Bureau of Statistics and at the virtual research room of Israeli Ministry of Education. Both entities reviewed the results to ensure that the confidentiality of the data is not unintentionally compromised.

I acknowledge financial support from the Pinhas Sapir Center for Development, the Foerder Institute for Economic Research, the Center for AI and Data Science at Tel Aviv University, and the Israeli Science Foundation grant no. 1929/19.

I have no relevant or material financial interests that relate to the research described in the paper.

A handwritten signature in black ink, appearing to read 'AS', on a light green rectangular background.
