# Competition and Pass-Through: Evidence from Isolated Markets 

Christos Genakos and Mario Pagliero

## Online Appendix

## FIGURE A1: AVERGE PRICES OF PETROLEUM PRODUCTS BEFORE THE EXCISE DUTY CHANGES

Notes. The four figures plot average retail prices of the different petroleum products (clockwise from left: Unleaded95, Super, Unleaded100, Diesel) and of heating oil during January 2010
Source: Authors' calculations based on data from the Greek Ministry of Development.

FIGURE A2: AVERAGE PRICE DIFFERENCES BETWEEN DIESEL, SUPER, UNLEADED 95, UNLEADED 100 and HEATING OIL.
FIGURE A2:AVERAGE PRICE DIFFERENCES BETWEEN DIESEL, SUPER, UNLEADED 95, UNLEADED 100 AND HEATING OIL.

Notes: The figures plot the evolution of average prices together with two local linear regression lines of the prices against time for diesel and heating oil separately ten days before and after the changes in excise duties for each of the three increases as detailed in Table 1 .
Source: Authors' calculations based on data from the Greek Ministry of Development.

FIGURE A4: CUMULATIVE FREQUENCY OF PRICE CHANGES FOLLOWING CHANGES IN VAT

Notes: The figure plots the cumulative frequency of station-product combinations that changed their prices between $\tau$ and $\tau+\delta$, where $\tau$ is the date of the VAT change and $\delta=1, \ldots, 10$, on islands with 1-3 (low competition) and 4-7 (high competition) gas stations. The Kolmogorov-Smirnov test rejects the equality of the CDFs at the 1 percent confidence level.

TABLE A1 - GREEK ISLANDS

| Number of gas stations: | 1 | 2 | 3 | 4 | 5 | 7 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Agios Eustratio |  |  |  |  |  |
|  | Agkistri |  |  |  |  |  |
|  | Anafi | Amorgos |  |  |  |  |
|  | Fourni | Antiparos |  |  |  |  |
|  | Kimolos | Astypalaia |  | Alonnisos |  |  |
|  | Nisyros | Folegandros |  | Karpathos |  |  |
|  | Samothraki | Kythnos |  | Sifnos |  |  |
|  | Serifos | Paxi | Ithaki | Kythira | Ios | Aigina |
|  | Sikinos | Poros | Kea | Skopelos | Milos | Tinos |
|  | Symi | Spetses | Skyros | Skiathos | Mykonos | Leros |

Note: Greek islands with less than eight gas stations.

Notes: The table reports results for the parallel trend assumption test based on equation (3) in the main text, where the trend is replaced by day binary indicators. Only the interaction
effects of day fixed effects with the treat variable are reported here. Standard errors clustered at the island level are reported in parentheses below coefficients.
Source: Authors' calculations based on data from the Greek Ministry of Development, the Hellenic Statistical Authority and Eurostat.

TABLE A5 - CONDITIONAL PASS-THROUGH AND COMPETITION - ROBUSTNESS

Notes: Estimated by OLS with standard errors clustered at the island level reported in parentheses below coefficients. All regressions include time, product $\times$ station, excise change $\times$ product type and excise change $\times$ station FE as indicated in Table 4 , column 2 . The Notes: Estimated by OLS with standard errors clustered at the island level reported in parentheses below coefficients. All regressions include time, product $\times$ station, excise change $\times$ product type and excise change $\times$ station FE as indicated in Table 4 , column 2 . The
dependent variable is the retail price of product $k$, on island $i$, in gas station $s$, and day $t \in\{\tau-1, \tau+10\}$, where $\tau$ is the date of each of the three excise duty changes. The pass-through is estimated using observations for station-product combinations that have dependent variable is the retail price of product $k$, on island $i$, in gas station $s$,
changed the price at least once between $\tau$ and $\tau+10$ (conditional pass-through).

|  | (0.051) |  |  |  |  |
| Observations | 945 | 649 | 649 | 531 | 569 |
| Within $\mathrm{R}^{2}$ | 0.931 | 0.958 | 0.958 | 0.956 | 0.955 |
| Time FE | yes | yes | yes | yes | yes |
| Product $\times$ Station FE | yes | yes | yes | yes | yes |
| Excise incident $\times$ Product type FE | yes | yes | yes | yes | yes |
| Excise incident $\times$ Station FE | yes | yes | yes | yes | yes |

Notes: The dependent variable is the retail price of product $k$, on island i , in gas station s , and day $t \in\{\tau-1, \tau+10\}$, where $\tau$ is the date of each of the three excise duty changes. The pass-through is estimated using all available observations for station-product combinations (average pass-through). Standard errors clustered at the island level are reported in parentheses below coefficients.
