

Policy Disclosure for the *Journal of Economic Perspectives*

Author: Gregory Tassey

Title: “Competing in Advanced Manufacturing: The Need for Improved Growth Models and Policies”

This paper was written as part of my duties as Senior Economist, National Institute of Standards and Technology (NIST). I subsequently left NIST and am now Research Fellow, Economic Policy Research Center, University of Washington.

Because the paper discusses a range of market failures in advanced manufacturing that warrant government policy intervention, such discussion has direct relevance for specific roles carried out by NIST and by government in general.

All papers submitted for publication by NIST staff must be reviewed and approved by an internal editorial review board. This was done in February 2013, prior to my departure from NIST.
